Removal of Unwanted Leg Veins

We're pleased to offer a revolutionary laser treatment that can quickly and safely eliminate unsightly leg veins, spider veins and broken capillaries up to 4 mm in diameter.

Call for an expert, FREE CONSULTATION : 970-945-8503.

What are the benefits?

Our advanced technology minimizes the redness and bruising normally associated with traditional treatments. Best of all, our technology allows us to treat people of any ethnic origin and skin type including tanned skin.

How does it work?

The laser energy is absorbed by the pigment in your blood and collapses the unwanted vein. The laser energy is delivered through a hand-held device with a cooling tip that protects your skin and increases your comfort.

When will you see results?

The appearance of leg veins will either dramatically fade or completely disappear during the treatment as you watch. Some vessels may show temporary redness and/or swelling that will subside after a few hours to a few days. The treated vessels will gradually disappear as the healing process occurs. This may take between 2 and 12 weeks.

How often can you have it done?

Most patients see excellent improvement after just one or two treatments. Everyone responds differently to treatments, with some needing only one treatment and others requiring several treatments. You can optimize your results by closely following the after-treatment instructions which include the use of compression hose for 3-5 days. The usual re-treatment interval is 8 weeks.

Are there any side effects?

The treatment stings briskly but only at the moment that the laser is fired and the use of a topical anesthetic cream will improve your comfort. Immediately following the procedure you may experience some redness in the treated area. The redness usually dissipates within 1 to 3 days. Also, although it is not the intended purpose of this particular treatment, hair growth may be impaired in the treated area.

How long does it take?

Most treatments will take between 10 and 60 minutes, depending on the size of the area to be treated. Every patient will have a free, initial consultation with Dr. O'Brien where a topical anesthetic cream will be prescribed. It should be applied 60 minutes before the treatment time. At your first treatment appointment, you will be prescribed a pair of compression support hose which should be worn for 3-5 days after the treatment to improve your long-term results and reduce the number of treatments required.

How much does it cost?

Your final cost will be assigned based on the treatment time required. This includes the cost of anesthetic cream and compression hose. Subsequent treatments to the same leg veins are at a reduced cost of \$100 for up to 30 minutes. Prices are subject to change without notice.

Individual Treatment	Price	Typical Area Treated
30 minute consultation	No charge	
10 Minutes	\$225	Depends on size and location of veins
20-30 Minutes	\$325-425	Depends on size and location of veins
40 Minutes	\$525	Depends on size and location of veins
