## 7. Refractive Surgery

Latest refractive surgical techniques including LASIK, PRK, and Intralase

Shannon McCole, MD

## Who should be referred to Ophthalmology?

1. Diabetic patients require yearly examinations
2. Patients on ethambutol and plaquenil require baseline and ongoing screening examinations
3. Patients with a family history of eye disease (glaucoma, macular degeneration/etc)
4. Older patients with visual complaints to evaluate for cataracts
  - Difficulty with night vision/driving
  - Difficulty reading
5. All sickle cell patients, especially sickle cell disease
6. Patients with signs of eye infection refractive to treatment or atypical in presentation.
7. Patients with JRA, RA, sarcoidosis, inflammatory bowel disease or other rheumatologic diseases to screen for uveitis.
8. Visual complaints such as flashes, dimming of vision or missing part of the visual field require urgent evaluation to rule out retinal detachment.
