## **NOVASURE + Essure**

**The NovaSure Procedure reduces or eliminates heavy periods while improving quality of life.**

It is a quick, safe, simple, one-time endometrial ablation treatment that controls a heavy flow. Treatment time is about 90 seconds and needs to be performed once to lighten or stop your periods. Also the recovery time is quick, most women experience no pain and can return to work and regular activities the next day.

**The Essure Procedure is a permanent birth control procedure.**

It is a gentle procedure that can be performed at Women's Care in minutes. It is covered by most insurance companies. Essure offers what no other birth control ever has:

- No cutting
- No going under general anesthesia
- No slowing down to recover
- No hormones
- Peace of mind—your Women's Care doctor will confirm when you can rely on Essure for birth control.
- You'll never have to worry about unplanned pregnancy again.
